WORK EXPERIENCE

2024 – CURRENT Rende, Italy

university research assistant Università della Calabria

EDUCATION AND TRAINING

09/2020 – 04/2024 Rende, Italy

Master's Degree In Software Engineering Università della Calabria

09/2015 – 09/2020 Rende, Italy

Bachelor's Degree in Software Engineering Università della Calab

LANGUAGE SKILLS

MOTHER TONGUE(S): Italiano

Other language(s):

English

Listening C1
Spoken production B2
Reading C1
Spoken interaction B2
Writing B2

German

Listening A2
Spoken production A2
Reading A2
Spoken interaction A2
Writing A2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

DIGITAL SKILLS

PROGRAMMING LANGUAGES
Java | Python | Scala | C

WEB DEVELOPMENT
Django | Bootstrap | JavaScript | HTML

FRAMEWORKS AND LIBRARIES
Apache Spark | Tensorflow | PyTorch | Scikit-learn

DATABASES
PostgreSQL | MySQL

TOOLS
Linux | Docker | Git

PROJECTS

Articles Web Application (HTML, CSS, JavaScript, Bootstrap, Pyth
  • Developed a web application using Django and Bootstrap for seamless user
    article management.
  • Implemented responsive design principles with Bootstrap to ensure optimal
    and screen sizes.

- Enabled users to create, edit, and delete articles, enhancing content management capabilities
- Enabled users to comment articles to foster user engagement and interaction.

09/2023 – 11/2023

Face Generation through Diffusion Models (Python, PyTorch)

- Conducted a thorough review of existing literature and research on diffusion models and their applications in image synthesis, laying a solid theoretical foundation for the project.
- Implemented a Diffusion Model in PyTorch to generate lifelike human faces, leveraging a dataset of 10,000 images.

02/2023 – 03/2023

Deep Learning Predictor for Fungus Image Classification (Python, Tensorflow, Keras)

- Developed an advanced deep learning model using TensorFlow for classifying fungus images into ten categories.
- Prepared and preprocessed the dataset, including resizing, normalizing, and augmenting images to enhance model generalizability.
- Built a CNN by extending pre-trained models VGG16 and ResNet50 using transfer learning to improve classification accuracy.

05/2021 – 06/2021

Predictive Modeling for Heart Disease (Python, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn)

- Conducted an in-depth analysis of a dataset containing diverse patient information using NumPy and Pandas, including data cleaning, preprocessing, and feature engineering to extract key insights related to cardiovascular disease risk.
- Utilized Matplotlib and Seaborn to present analysis results through histograms, box plots, heatmaps, and scatter plots, identifying patterns and correlations.
- Trained several machine learning algorithms with Scikit-learn, including Decision Trees, Random Forest, Logistic Regression, SVM, KNN, and Naive Bayes, involving data splitting and hyperparameter tuning for optimal performance.
- Evaluated models using performance metrics such as Accuracy, Precision, Recall, and F1-Score, with Cross-Validation and ROC Curves/AUC to ensure robustness and effective classification.
- Compared model performance to identify the best one, validated the final model on a separate validation set to ensure generalizability.
